

Open Access is a kind of free and unrestricted online availability of knowledge that provides immediate, worldwide, barrier-free access to the full text of research articles without requiring a subscription to the journal in which these articles are published. Based on the original BOAI statement ([Budapest Open](#)

[Access Initiative](#)

)

we signed

),

readers are allowed to copy, use, distribute, transmit and display the work publicly and to make and distribute derivative works, in any digital medium for any responsible purpose, subject to proper attribution of authorship.

Since, an article processing (tracking, editing, formatting, page design, online publication, hosting, etc.) has considerable cost for each journal's team that do not charge for access, they rely on other means of funding publication. In this publishing model, the costs are usually covered by the author's institution or research funds. These Open Access charges replace subscription charges and allow the publishers to make the published material freely available to all interested online readers and audiences. At the same time, authors who publish in Open Access journals retain the copyright of their article.

Other than their cost-recovery model, Open Access journals are no different from traditional subscription-based journals; they undergo the same peer-review and quality control as any other scholarly journal. Moreover, Open Access allows for maximum visibility, uptake and use of the published material.

Open Access
